

inPhoto ID PS Software

inPhoto ID PS - Fastest Way To Quality ID Photo

inPhoto ID PS

inPhoto ID PS is an application for remote camera control and ID photo preparation that works with a wide range of Canon PowerShot cameras, allowing you to automate a good deal of your daily tasks. Supporting an extended set of functions, from live preview to cross-application image capture, it gives you full control over picture quality, and great flexibility in settings adjustment. This is a unique instrument for capturing viable, high-quality ID photos on the go, in line with your specific requirements. Our app will come in handy for everyone who has to handle multiple ID snapshots on a daily basis.

Main fetures:

- Canon PowerShot models supported
- Live preview from camera
- Basic camera settings control
- Camera optical zoom control
- Auto exposure modes supported

Remote shooting & control

With inPhoto ID PS, you can remotely control some of the most popular models of Canon PowerShot cameras to capture ID photos right to your computer. Moreover, you will be able to fix the settings in real-time according to the task at hand. Our application offers remote control of optical zoom, brightness and contrast, automatic flash mode activation and other handy features meant to facilitate your shooting routine. Taking ID photos has never been so fast and easy!

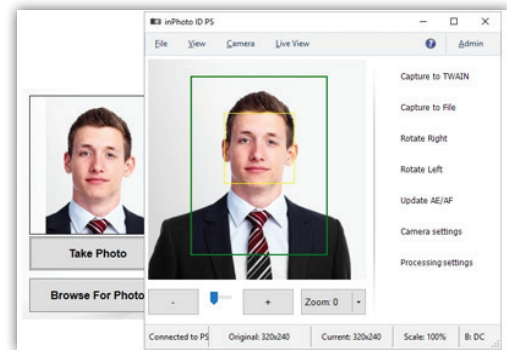

ID photo preparation

The application fully automates the shooting process enabling face detection for all types of supported cameras. The photo will also be automatically cropped based on recognized face area to provide the best portrait possible. This convenient function will save you a lot of manual editing. If you need different sizing, you can easily alter the crop settings to meet your particular needs.

Live Preview

The problem with most similar apps is the lack of pre-capture options. inPhoto ID PS allows you to select an optimal view and adjust position before clicking the shutter. You will have full control over the final look of your picture and the ability to experiment with the shot settings before you are totally satisfied with the result. The application also supports post-shot editing and resizing as well as manual rotation of both live preview and result images.

TWAIN image capture

While inPhoto ID PS allows you to automatically save ready pictures to designated folders on your computer, it also suggests the ability to transfer captured ID photos to a number of third-party applications via TWAIN protocol. Some of the most widely used programs working with this feature are Adobe Photoshop, ID Works, CardFive, EPISuite - basically any TWAIN-friendly app, including one of your own.

System requirements :

- Windows 10/8/7/Vista/XP
- both 64bit and 32bit supported
- 50Mb free disk space
- Windows compatible PS camera

Recommended: Canon PowerShot SX420
